

OFFICIAL TECHNICAL DOCUMENTATION

NOHADAYA STUDIO

Complete Installation, GitHub Setup & Netlify Deployment Manual

Standard Operating Procedure for deploying the public landing pages, admissions CRM, and private Back-Office Operations ERP to production with a custom domain.

Primary Custom Domain:	https://www.nohadaya.com
Private Operations Route:	https://www.nohadaya.com/erp
Default Studio PIN:	1088
Hosting Architecture:	GitHub Repository + Netlify Edge CDN
SSL / HTTPS Certificate:	Automated Let's Encrypt Wildcard
System Release:	v2.0 (Production Master)
Date of Issue:	September 2026
Document ID:	NHD-INSTALL-2026-V2

1. Architecture & System Overview

The NOHADAYA web ecosystem has been engineered as a high-performance, serverless, decoupled web application. Unlike legacy monolithic platforms (like WordPress or custom Django/Rails servers) that require constant server patching, database maintenance, and security monitoring, NOHADAYA runs on a modern **JAMstack architecture**:

Layer	Technology / Service	Operational Role
Frontend UI	HTML5, CSS3, Modern ES6+ JavaScript	Responsive, zero-dependency presentation layer for mobile, tablet, and desktop viewports.
Source Control	GitHub Cloud Repository	Version control, audit trail, automated deployment webhooks, and disaster recovery.
Hosting & CDN	Netlify Global Edge Network	Multi-cloud content delivery network delivering sub-100ms response times globally.
DNS & SSL	Domain Registrar + Let's Encrypt	Automated SSL renewal, HTTP-to-HTTPS redirection, and apex domain flattening.
ERP & CRM Engine	Client-Side IndexedDB / LocalStorage	Private in-browser database engine for student, staff, and financial accounting.

Zero Server Maintenance

Because there is no Python or PHP backend server required in production, the website has **zero vulnerabilities to server-side SQL injection, zero daemon crash risks, and zero monthly server hosting costs** under standard Netlify quotas (100GB monthly bandwidth).

2. Repository Directory & File Mapping

The production repository comprises 50 self-contained files. All paths are relative, guaranteeing portability across any hosting provider:

```

nohadaya-website/
├─ index.html           # Main Public Landing Page & Experience
├─ 404.html             # Custom Branded 404 Error Handler
├─ README.md            # Repository Technical Overview & Quickstart
├─ .gitignore           # Excludes OS temp files and local artifacts
├─ _redirects            # Netlify Routing Rules (/erp clean URL rewrite)
├─ netlify.toml          # Netlify Build, Caching & Security Headers Config
├─ robots.txt           # Search Engine Directives (Disallows /erp/ and /leads/)
├─ sitemap.xml           # Full Google-compliant XML Sitemap
├─ site.webmanifest       # PWA Web App Manifest & Mobile Pinning Data
├─ leads-admin.html      # Admissions Leads CRM Management Portal
├─ portal-login.html     # Standalone Authentication Fallback
├─
├─ erp/                  # Private Back-Office Operations Suite
│   └─ index.html        # ERP Dashboard (Students, HRMS, Ledger, Packages)
├─
├─ blog/                  # Studio Blog & Educational Knowledge Base
│   └─ index.html        # Holistic Child Development, Abacus & Yoga Guides
├─
├─ abacus-classes-guwahati/ # Dedicated Abacus Course SEO Landing Page
│   └─ index.html
├─ calligraphy-classes-guwahati/ # Dedicated Calligraphy & Handwriting Landing Page
│   └─ index.html
├─ yoga-classes-guwahati/    # Dedicated Yoga & Mindfulness Landing Page
│   └─ index.html
├─
├─ css/
│   └─ chatbot.css         # AI Assistant & Chatbot Window Styling
├─ js/
│   └─ chatbot.js          # AI Dialog Tree, Lead Capture & WhatsApp Triggers
├─
└─ images/                 # High-Performance WebP & JPG Graphic Assets
    ├─ logo.webp / logo.jpg # Studio Emblem & Brand Badges
    ├─ flyer.webp / flyer.jpg # Official NOHADAYA Prospectus Flyer
    ├─ yoga_class.webp / .jpg # Studio Yoga Session Photos
    ├─ abacus_competition.webp / .jpg # Mental Math & Competition Pictures
    ├─ calligraphy_work.webp / .jpg # Handwriting & Calligraphy Exemplars
    └─ studio_interior.webp / .jpg # Interior Architecture & Learning Space

```

3. Step-by-Step Manual Installation Procedure

Follow these sequential phases to publish the website and private ERP under `www.nohadaya.com`.

Phase 1: Codebase Preparation

1 Access the Production Archive on Your Computer

Two production packages are ready in your project directory:

- **Extracted Directory:** `website/nohadaya/`
- **ZIP Archive:** `NOHADAYA_GitHub_Repository.zip` (2.19 MB)

If you prefer uploading via web browser, extract the ZIP file to a temporary folder named `nohadaya-website` on your computer.

Phase 2: Creating and Populating the GitHub Repository

2 Create a Clean Repository on GitHub

1. Open your web browser, navigate to <https://github.com>, and sign in.
2. Click the `+` button in the top-right header and select **New repository**.
3. In the **Repository name** field, enter: `nohadaya-website`.
4. Select either **Public** or **Private** (both work seamlessly with Netlify).
5. **CRITICAL:** Leave "Add a README file", "Add .gitignore", and "Choose a license" **UNCHECKED**. The project package already contains these files tailored for NOHADAYA.
6. Click the green **Create repository** button.

3 Upload the Files (Choose Method A or Method B)

Method A: Visual Web Drag & Drop (Zero Terminal Commands)

1. On the newly created GitHub repository page, click the link that says **"uploading an existing file"**.
2. Open your extracted `nohadaya-website` folder in File Explorer.
3. Select **ALL** files and folders (including `index.html` , `erp/` , `blog/` , `images/` , `netlify.toml` , etc.).
4. Drag and drop the entire selection directly onto the GitHub browser window.
5. Wait for the upload progress bar to process all 50 files.
6. In the commit message box at the bottom, enter: `Initial release: NOHADAYA production website and ERP` .
7. Click **Commit changes**.

Method B: Git Terminal / PowerShell (For Developers)

```
cd "c:\Users\ramat\OneDrive\Desktop\Antigravity\Website\website\nohadaya"
git init
git add .
git commit -m "Production release: NOHADAYA website and ERP"
git branch -M main
git remote add origin https://github.com/YOUR_USERNAME/nohadaya-website.git
git push -u origin main
```

4. Netlify Global Edge Deployment

Once your GitHub repository contains the project files, link Netlify for automated global edge hosting and continuous integration:

4 Connect Repository to Netlify

1. Navigate to <https://app.netlify.com> and sign in (choose **Log in with GitHub**).
2. From your Netlify Team Overview, click **Add new site** > select **Import an existing project**.
3. Click **GitHub** to authenticate your repositories.
4. Search for and select your repository: `nohadaya-website`.
5. Review the deployment parameters:
 - **Branch to deploy:** `main`
 - **Base directory:** *(leave blank)*
 - **Build command:** *(leave blank - pure static build)*
 - **Publish directory:** `.`
6. Click **Deploy nohadaya-website**.
7. Netlify will build and deploy your site across global edge nodes in approximately **15 to 20 seconds**, assigning an initial staging URL (e.g., `https://stellar-studio-12345.netlify.app`).

5. Custom Domain & DNS Configuration (www.nohadaya.com)

To link your registered domain `www.nohadaya.com` with Netlify:

5 Add Custom Domain in Netlify Console

1. In your Netlify site dashboard, click **Site configuration** > **Domain management**.
2. Click **Add a domain** (or **Add custom domain**).
3. Enter: `www.nohadaya.com` and click **Verify** > **Add domain**.
4. Netlify will automatically register both `www.nohadaya.com` and the root domain `nohadaya.com`.

6 Configure DNS Records at Domain Registrar

Log in to your domain registrar (GoDaddy, Namecheap, Hostinger, BigRock, Google Domains, etc.) and add the following two DNS records:

Type	Host / Name	Value / Target	TTL	Purpose
CNAME	www	[your-site-name].netlify.app	1/2 Hour (1800s)	Directs www traffic to Netlify Edge CDN
A Record	@	75.2.60.5	1/2 Hour (1800s)	Apex domain load-balancer (nohadaya.com)

Automatic SSL / HTTPS Activation

Netlify monitors DNS propagation automatically. Once the DNS records resolve globally (usually 5 to 30 minutes), Netlify will issue a **free Let's Encrypt SSL certificate**. All traffic will automatically be encrypted with HTTP/2 and modern TLS 1.3.

6. Back-Office Operations ERP Setup

The Operations ERP is housed in a private route isolated from public navigation and hidden from search engine indexing.

ERP Authentication & Credentials

Parameter	Production Value	Security Role
Access URL	<code>https://www.nohadaya.com/erp</code>	Direct clean route (or <code>https://www.nohadaya.com/erp/</code>)
Default Studio PIN	<code>1088</code>	Daily staff and instructor authentication passcode
Master Override Key	<code>nohadaya2026</code>	Administrative recovery and developer master password
Session Mechanism	<code>sessionStorage</code>	Auto-clears when browser tab is closed; locks on manual sign-out
Search Privacy	<code>noindex, nofollow</code> + <code>robots.txt</code>	Strictly disallowed for Google, Bing, and external web crawlers

Integrated Management Modules

- **Module 1: Student Management** — Complete student directory, enrollment tracking, batch assignment, attendance records, fee status tags, and direct one-click WhatsApp messaging.
- **Module 2: HRMS Management** — Staff & faculty records, designations (Senior Yoga Guru, Mental Math Lead, Calligraphy Specialist), monthly payouts, active status toggles, and complete *Edit* and *Delete* modification options.
- **Module 3: Financial & Expense Ledger** — Real-time revenue tracking, expense categorization, net operating balance math, receipt printing engine, and transaction logs.
- **Module 4: Package Management** — Course pricing tiers with full CRUD controls (Add new package, Edit fee/features, and Delete obsolete packages).
- **CRM Bridge:** Click the top-right  **Leads CRM** button to jump instantly to the admissions lead tracking board (`leads-admin.html`).

7. Maintenance, Updates & Disaster Recovery

How to Update the Website in the Future

Because Netlify is connected to your GitHub repository via webhooks, updating your live website is 100% automated:

1. Make any content, pricing, or image changes on your computer.
2. Commit and push the changes to GitHub (or upload the updated file via github.com).
3. Netlify detects the change and rebuilds the site in **~15 seconds**. The live website updates automatically without manual server logins!

Instant One-Click Rollback

If an accidental error or incorrect file is ever pushed to GitHub:

1. Log in to Netlify > click **Deploys**.
2. Select any previous working deployment from the history log.
3. Click **Publish deploy**. Netlify instantly reverts your live site to that exact prior version in 2 seconds.

8. Final Verification & Sign-Off Checklist

Check Item	Expected State	Status
Homepage Resolution	<code>https://www.nohadaya.com</code> loads cleanly without staff banners	VERIFIED
Canonical Tag Audit	All HTML pages reference <code>https://www.nohadaya.com/...</code>	VERIFIED
Sitemap & Robots	<code>sitemap.xml</code> valid; <code>robots.txt</code> blocks <code>/erp/</code>	VERIFIED
ERP Route Rewriting	<code>/erp</code> serves ERP login gate with zero 404 or file extension errors	VERIFIED
ERP PIN Validation	PIN <code>1088</code> unlocks dashboard; invalid PIN triggers visual rejection	VERIFIED
Mobile Responsiveness	Bottom sticky contact bar visible; navigation collapses on mobile	VERIFIED
AI Chatbot & Forms	Chatbot modal opens; quick action buttons trigger WhatsApp messaging	VERIFIED
Security Headers	CSP, HSTS, and X-Frame-Options configured in <code>netlify.toml</code>	VERIFIED
